Meet9ja Project Summary

Develop a cross-platform mobile dating application called **Meet9ja** for iOS and Android, including backend and admin panel, built from scratch (no third-party source code reuse to avoid piracy/legal issues).

The MVP will focus on core dating features with **video calling** and **live streaming** integrated, plus monetization for premium features.

- **Only Premium users** will be able to start a live stream.
- **Non-Premium users** may watch according to access rules.

Deployment:

- Developer will provide APK (Android) and iOS video demo (via TestFlight in second milestone) before publishing to app stores.
- Final source code and ownership will be transferred after both milestones are completed.

Modules & Deliverables

1. User Onboarding

- Sign up via Email, Phone, or Social login.
- Profile setup includes photo upload, bio, and preferences.
- Optional age verification for live streaming access.

2. Home Screen Tabs

1. **Match** – Swipe cards to like or pass.
2. **Advice** – (Optional placeholder for MVP; focus remains on dating, live streaming, monetization).

3. **Live** – View active live streams or go live (Premium only).
4. **Feed** – View posts, stories, and saved live replays (basic MVP version may only require viewing).
5. **Profile** – View/manage profile, saved posts, and settings.

3. Matching & Chat

- Swipe to find matches.
- On match: private chat with text, images, voice notes, and video calling.

4. Live Streaming

- **Only Premium users** can start a live stream.
- **Non-Premium users** cannot go live but can watch streams based on visibility rules.
- Powered by **Agora** (or equivalent).
- **Visibility options when starting a live:**
    - **Public** – Visible to all users, discoverable via Live list, search, and recommendations.
    - **Friends & Followers Only** – Visible only to broadcaster's followers and mutual friends.
- **Access rules for matches:**
    - If a match does not follow you, they cannot see your "Friends & Followers Only" live in their Live list.
    - They can still join by searching your name in the Live section.
- Interactive chat & sending gifts available to all viewers who can access the live.
- Live status visible in feed when online/live (per access rules).
- Option to save replay to profile (if allowed).

5. Monetization (MVP scope)

Premium features:

- Ability to start live streaming.
- Unlimited swipes/likes.
- In-app purchases for premium subscription.

Non-Premium users may still watch, comment, and send gifts during lives they can access, but cannot start their own live streams.

6. Admin Panel

- User management.
- Content moderation (especially for live streams).
- Viewing and managing reported users.
- Basic analytics.
- Premium subscription management.

Tech Stack

- **Frontend:** Flutter (iOS & Android)
- **Backend:** Node.js/Express or Django
- **Database:** Firebase + Cloud Firestore / MySQL
- **Live Streaming:** Agora SDK (WebRTC protocol, sockets)
- **Media Storage:** AWS S3 or Cloudinary
- **Payments:** Stripe / Google Play Billing / Apple IAP

- **Push Notifications:** Firebase Cloud Messaging
- **Admin Panel:** Web-based (React.js/Next.js + backend integration)

Constraints & Clarifications

- Development from scratch – no purchased source code reuse.
- Publishing occurs only after full delivery.
- Premium functionality must be integrated in MVP (live streaming + unlimited swipes).
- Advice hub not included in MVP unless agreed.
- Live stream must support Public & Friends/Followers Only (per updated rules).
- Monetization uses native payment systems.
- Client to provide Google Play Console account before deployment.

Assets Needed from Client

- App name & branding assets.
- Terms of Service & Privacy Policy.
- Apple Developer (Organization) account (already available).
- Google Play Console account.
- Optional: Reference designs or inspiration apps.

Timeline

- **Total Development:** ~7 days
    - **Phase 1:** ~5 days for Android APK + iOS demo
    - **Phase 2:** ~2 days for deployment, TestFlight, and handover

---

Pending Clarifications

1. Final decision on Advice tab for MVP.
2. Confirmation on Feed & Posts capabilities for MVP.
3. Admin panel feature scope.
4. Whether age verification for live streaming is mandatory in MVP or post-launch.
5. Payment processor choice for premium subscription.
6. Final branding assets and color scheme.
